

ASHP's Drug Shortages

The Leading National Drug Shortages Database

Hundreds of Drug Shortage Bulletins and counting!

Your go-to source for information and resources on drug products, their availability, and management.

ASHP's Drug Shortages database is the most widely recognized and the leading source of evidence-based drug shortage information for clinicians, consumers, and health policy leaders.

ASHP's Drug Shortages identifies drugs on shortage and assists in discovering other potential shortages so hospitals and health-systems can pin point where those drugs or alternatives have been stockpiled in areas that don't have a large need (for example, an outpatient surgical center) and target them for reallocation to areas with need (for example, emergency room).

Reduce Time Spent

- Identifying drugs on shortage and what presentations are still available
- Researching therapeutic alternatives

Save Budget Resources

A recent study^a on the hidden cost of drug shortage in U.S. Hospitals found it's estimated:

- Drug shortages are costing facilities at least **\$359 million per year** in additional spend on labor alone.
- U.S. Hospitals spend an additional **8.6 million** personnel hours per year in managing the impact of drug shortages
