A 19-year-old female is admitted with a 5-week history of myalgia, weight loss, and night sweats. Over the past week, she started to become breathless on minimal exertion. Physical examination, including a temperature of 38.1°C (100.6°F). Auscultation of the precordium reveals an early diastolic murmur at the left lower sternal edge. The fundoscopic examination is shown below. Examination of her chest, abdomen, and central nervous system is normal. Which investigation should be performed to confirm the suspected diagnosis?

- Serum complement level
- Sensitivity for bacteria
- Serum ANA

Which of the following are examples of a nurse case manager’s activities?

- Select all that apply
  - Witnessing informed consent
  - Measuring client outcomes
  - Transporting clients
  - Teaching the client
  - Assisting with daily living
