ARE YOUR NURSING STUDENTS REALLY LEARNING?

Ideas to Ensure They Are!

One of the common concerns we hear from nursing school faculty relates to what should be taught, what is being taught and what is being retained by students. What will students need to be compassionate, communicative, and successful caregivers? Whatever your curricular style or specialty, ensuring that your students are learning is likely top of mind for you and your colleagues. Consider testing these ideas as ways to improve teaching outcomes and ensure that students retain information for success in nursing school and beyond:

Flip your classroom and exceed student expectations. Ever wished students engaged more in discussions about concepts? When faculty can easily upload course materials and assign readings and questions on a technology platform like Osmosis, students are more likely to attend class and come prepared to lead discussions. The flipped classroom approach not only draws more students to class, it improves retention of information compared to content delivered by lecture alone.¹

Today’s most effective educators are finding ways to do more than meet student expectations; they’re exceeding them and facilitating active learning to help students prepare for class, licensing exams, and clinical experience. Faculty also have more autonomy and control over the curriculum with a platform that automatically aligns study materials with lesson plans.

Osmosis becomes your go-to place. Both faculty and students are starting there rather than deciding to maybe try Osmosis.

— Raymond H. Curry, MD, FACP
Senior Associate Dean for Educational Affairs,
University of Illinois College of Medicine

**Are Your Nursing Students Really Learning?**

2. **Make preparation and collaboration easier for everyone.** Advanced notice of discussion-based topics draws students to class, as do opportunities for increased collaboration. Students can work in teams to focus on their near- and far-term goals with curriculum-aligned resources, giving them a place to review material that’s been covered and prepare for what’s to come. From videos to flashcards and questions they’ll see on exams, the Osmosis Prime platform provides a multi-dimensional web of learning for your students. *With over 70 million all-time video views and 3 million flashcards created monthly, students are collaborating to learn and reinforce concepts.*

3. **Establish lifelong habits for self-guided study and adaptive learning.** Planning, learning, assessing and adjusting are critical stages for an adaptive learner in the always-evolving nursing field. With so much focus on near-term goals, a platform like Osmosis can help students map a more long-term view of their studies and develop adaptive learning skills. The Osmosis platform helps with time management by focusing students on the information they must know for exams and patient care. *Group workspaces, videos, note taking tools, question banks, and a flashcard builder help students learn, retain and recall content.* Before taking exams or walking into a clinical setting, students refresh their knowledge and quiz themselves on material on their laptops or mobile devices. Technology platforms like Osmosis support lifelong learning and continue to evolve as new concepts are introduced. Studies have shown that students applying the evidence-based learning strategies built into the Osmosis platform can improve retention by up to 13%.
